

Abstract	
Background/Objective	Outline the background or context of the study and states the main objective or research question being addressed. Explain why the study was conducted and what gap in knowledge or problem it aims to address
Methods	Provide an overview of the research design, methodology, and techniques used to conduct the study. Include details about the participants or sample, data collection methods, and data analysis procedures.
Results	Summarize the main findings of the study. Highlight the key outcomes, trends, and significant results that emerged from the analysis of the collected data. It's important to present these findings objectively and succinctly.
Conclusions	Sum up the implications and conclusions drawn from the study's findings. Address how the results answer the research question or contribute to the broader field of study. Discuss any potential applications, recommendations, or further research suggested by the findings
Keywords	Include a list of keywords or phrases that are relevant to the study. These keywords help index the abstract and make it easier for readers to find the paper when searching for related topics
	<i>Note: The abstract is limited to a specific word count ranging from 200-250 word.</i>
Introduction	
Background and	Begin by introducing the broader context within which your research

	developments. Provide enough information to help the reader understand the context of your study.
Problem Statement and Rationale	Clearly state the research problem or question you're addressing. Explain why this problem is worth investigating and why it's relevant to the field. Discuss any gaps, inconsistencies, or limitations in the existing research that your study aims to address.
Significance and Purpose	Explain the significance of your research. How will your study contribute to the field's understanding, knowledge, or practice? Highlight the potential implications, practical applications, or theoretical advancements that may result from your findings.
Objectives	State the specific objectives of your study. What do you aim to achieve with this research? If applicable, present the research questions or hypotheses that guide your investigation.
Scope and Limitations	Clearly define the scope of your study. What aspects are included and excluded? Discuss any limitations, such as constraints on resources, data availability, or potential biases.
Theoretical Framework	If your research is grounded in a particular theoretical framework or conceptual model, introduce it here. Explain how this framework informs your study and provides a lens through which to analyze the data.
Methodology Overview	Provide a brief overview of the research methodology you employed. Describe the general approach you took to gather and analyze data. However, save the detailed methodology for the "Methods" section later in the paper
Methods (For Research Papers)	
Research Design	Describe the overall structure of the study, such as whether it's experimental, observational, cross-sectional, longitudinal, etc.
Participants or Sample	Specify the characteristics of the participants or subjects involved in the study. This includes demographic information and any relevant selection criteria.
Data Collection	Detail the methods used to collect data. This could involve surveys, interviews, experiments, observations, or other techniques. Explain how the data was collected and why those methods were chosen.
Variables and Measurements	Clearly define the variables under investigation and explain how they were measured or operationalized. Discuss any tools, scales, or instruments used for measurements.
Procedure	Outline the step-by-step procedure followed in the study. This

Data Analysis	Describe the techniques employed to analyze the collected data. Whether you're using statistical tests, qualitative analysis, or a combination of the two, provide details about the methods and tools used.
Ethical Considerations	Mention any ethical concerns associated with the study and how they were addressed, including informed consent, confidentiality, and adherence to relevant guidelines.
Methods (For Systematic Reviews)	
Search Strategy	Describe the systematic approach used to search for relevant literature. This might involve databases, keywords, inclusion and exclusion criteria, and any filters applied
Inclusion Criteria	Explain the criteria used to select the studies included in the review. This could encompass publication dates, study designs, relevance to the topic, and other factors.
Data Extraction	Detail how data from selected studies were extracted. This might include information about the authors, publication dates, research designs, key findings, and other relevant data points.
Synthesis Method	Discuss how the gathered information was synthesized and organized. This could involve thematic analysis, narrative synthesis, or any other approach used to derive meaningful insights from the literature.
Quality Assessment	If applicable, explain how the quality of the included studies was assessed. Mention any tools or criteria used to evaluate the validity and reliability of the selected research
Discussion	
Restatement of Key Findings	Summarize the main results of your study. Provide a concise overview of the most important findings that directly address your research objectives or questions.
Implications and Significance	Discuss the implications of your findings. How do your results contribute to the field's understanding of the research problem? Explain the practical, theoretical, or academic significance of your work. Highlight how your study advances existing knowledge or fills gaps in the literature.
Connection to Objectives	Reflect on whether your research objectives or hypotheses were met. If they were not fully met, discuss why and consider any unexpected outcomes.

	benefit from further investigation, and discuss how your study provides a foundation for future work.
<i>Limitations</i>	Acknowledge the limitations of your study. Address any constraints, biases, or factors that may have impacted the reliability or generalizability of your findings. Being transparent about limitations demonstrates a thoughtful and critical approach to research.
<i>Closing Thought</i>	End the discussion with a thought-provoking or insightful statement that leaves the reader with a lasting impression. This could be a reflection on the broader implications of the research or a call to action related to the research topic.
<i>Avoid New Information</i>	The discussion is not the place to introduce new information or concepts that have not been discussed earlier in the paper. Stick to summarizing and discussing the information already presented.

Sections

All submissions should have the following sections in this order:

1. Title
2. Authors and affiliations
3. Abstract
4. Introduction
5. Methods
6. Results
7. Discussion
8. Acknowledgments
9. References

Manuscript Formatting Requirements

Your manuscript (in Standard citation format) should not exceed 20 pages (including figures and tables) with font size 12, single spacing. Please submit 2-3 versions of your paper, in either Word document format or LaTeX format.

Word Document Instructions (minimum 2 versions)

1. The first file will be cited normally, with proper internal citations and a references section, using the citation format mentioned in the submission guidelines. Please remove all personal identifying

2. The second file must use the online publication citation format listed in the submission guidelines. This format encloses the complete citation within double parentheses at every location in the text. The citation must be exactly the same for every instance of its use. The open parentheses must be preceded by a space. For multiple citations, each citation must be contained within its own set of double parentheses, with a superscript comma between them. See the submission guidelines for examples.

Failure to adhere to our formatting requirements will result in delays or even manuscript rejection.

LaTeX Instructions (minimum 3 versions)

1. The first file should be the PDF of the LaTeX file, with proper internal citations and references, using the citation format mentioned in the submission guidelines. Please remove all personal identifying information from this document, including author names, affiliations, acknowledgements, etc. Please name this file the same as the title of your manuscript, with no additional information.

2. The second file is a modified version of the LaTeX file, saved in Word format. Remove all markdown in the document except for equations and inline equations (see below for examples of what to change). **Citations must then be formatted using the online publication citation format** listed in the submission guidelines. This format encloses the complete citation within double parentheses at every location in the text. The citation must be exactly the same for every instance of its use. The open parentheses must be preceded by a space. For multiple citations, each citation must be contained within its own set of double parentheses, with a superscript comma between them. See the submission guidelines for examples.

Change these:

`\section*{Introduction}` → Introduction

`\begin{table}[]` → Create the table in Word

`\begin{figure*}[h!]` → Figures do not need to be re-created. Attach all images used for the figures in the supplementary information.

Keep these:

`$ \alpha = \alpha_0 \cos(\omega t + \phi), $`

3. The LaTeX file must be uploaded as the supplementary information.

Failure to adhere to our formatting requirements may result in delays or rejection.

Citations and references formatting

To format the references:

3. Include all author names.
4. Authors should be listed with initials of given names, followed by the surname (ex: J. B. Robertson, P. L. Cole)
5. All articles cited must include the title, unitalicized, using sentence case capitalization (first word capitalized).
6. Book titles should be italicized, and use sentence capitalization.
7. Journal format: *Journal*. Vol. **X**, pg. Y-Z, Year, DOI.
8. References to websites should give authors if known, title of cited page, URL in full, and year of posting.
9. Each reference ends with a period.

Examples:

V. A. Zavala, P. M. Bracci, J. M. Carethers, L. Carvajal-Carmona, N. B. Coggins, M. R. Cruz-Correa, M. Davis, A. J. de Smith, J. Dutil, J. C. Figueiredo, R. Fox, K. D. Graves, S. L. Gomez, A. Llera, S. L. Neuhausen, L. Newman, T. Nguyen, J. R. Palmer, N. R. Palmer, E. J. Pérez-Stable, S. Piawah, E. J. Rodriguez, M. C. Sanabria-Salas, S. L. Schmit, S. J. Serrano-Gomez, M. C. Stern, J. Weitzel, J. J. Yang, J. Zabaleta, E. Ziv, L. Fejerman. Cancer health disparities in racial/ethnic minorities in the united states. *British Journal of Cancer*. Vol. **124**, pg. 315–332, 2021, <https://doi.org/10.1038/s41416-020-01038-6>.

D. Tao, Z. He, Y. Lin, C. Liu, Q. Tao. Where does fear originate in the brain? a coordinate-based meta-analysis of explicit and implicit fear processing. *NeuroImage*. Vol. **227**, pg. 117686, 2021, <https://doi.org/10.1016/j.neuroimage.2020.117686>.

To format the citations:

When submitting your article for publication, you will need two separate citation formats, one for reviewing and one for online publishing.

1. Standard citation format is as follows:

References are to be numbered, ordered sequentially as they appear in the text. References should appear as superscript numbers, before the punctuation mark, and without a space between the superscript number and the word. Only one publication should be listed for each number.

Please download and use our manuscript template.

NHSJS Manuscript Template – Standard Citations

[Download](#)

Examples:

plasmon resonance is a technique used to characterize binding interactions¹.

Multiple citations:

These conduction electrons can oscillate and give rise to surface plasmon resonance^{1,2}. Surface plasmon resonance is a technique used to characterize binding interactions³.

Please feel free to download and import our standard citation style into your citation manager of choice (Mendeley, Zotero, etc).

Download

2. Online publication citation format:

The online publication citation format is the same, except instead of using superscript numbers, the complete citation must be placed within double parentheses at every location in the text. The open parentheses **must be** preceded by a space. For multiple citations, each citation must be contained within its own set of double parentheses, with a **superscript comma** (,) between them, not a single quote ('). **Please download and use our manuscript template.**

Download

Examples:

Single citation:

These conduction electrons can oscillate and give rise to surface plasmon resonance ((U. Kreibig, M. Vollmer. *Optical properties of metal clusters*. Vol. **25** Springer Science & Business Media, 2013.)). Surface plasmon resonance is a technique used to characterize binding interactions.

Multiple citations:

These conduction electrons can oscillate and give rise to surface plasmon resonance ((U. Kreibig, M. Vollmer. *Optical properties of metal clusters*. Vol. **25** Springer Science & Business Media, 2013.)) (W. Hou, S. B. Cronin. A review of surface plasmon resonance-enhanced photocatalysis. *Advanced Functional Materials*. Vol. **23**, pg. 1612–1619, 2013, <https://doi.org/10.1002/adfm.201202148>.)). Surface plasmon resonance is a technique used to characterize binding interactions.

Please feel free to download and import our online citation style into your citation manager of choice (Mendeley, Zotero, etc).

NHSJS Online Citations.csl

Download

Important: After inserting the citations in the online version this way, you must go into “Find and Replace” and replace the normal commas with superscript commas. To do so, follow the steps below:

3. Replace with `)$ ($`
4. Then search for `$`
5. Replace with `,` then select Format → Font → superscript to insert superscript commas.
